RLBUH HOSPITAL WARD 4Y

- Project Value: £407,000.00
- Project Type: Refurbishment
- Project Aim: Ward Conversion
- Project Completion: July 2015

RLBUH HOSPITAL WARD 4Y

The brief was to completely change the existing clinical ward into a treatment and recovery area for cancer patients.

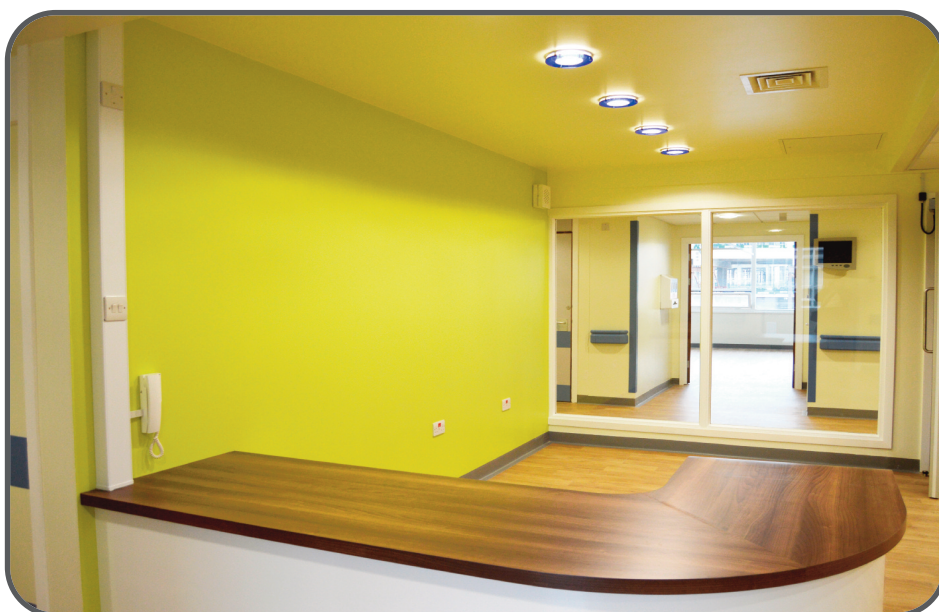

It was made very clear to us that the finished project was intended to put patients and relatives at ease during their treatment and aftercare and to this end we worked very closely with our designer to ensure the normal quite harsh environment of a clinical ward was softened which included the use of pastel colours and soft furnishings throughout.

The works consisted:

- Removal of existing suspended ceilings and installation of new feature ceilings throughout.
- Removal of existing flooring and installation of new throughout.
- Removal of existing lighting, power and data and replace with new including feature lighting to the new welcome area.
- Formation of new welcome area incorporating custom built reception counter and seating area for new arrivals.
- Formation of new relative's area incorporating new soft furnishings and refreshment area.
