ROYAL LIVERPOOL HOSPITAL WARD DEEP CLEAN

- Project Value: £500,000.00
- Project Type: Internal Refurbishment
- Project Aim: Upgrade of Wards
- Project Completion: October 2013

ROYAL LIVERPOOL HOSPITAL WARD DEEP CLEAN

IED were the successful bidder on an open tender process for the initial refurbishment project and due to performance were invited to negotiate subsequent phases. The wards were handed over with vacant possession, but access & egress for operatives & materials had to be gained through the fully functional hospital.

The works consisted:

- Internal demolition & strip out of existing finishes, fixtures & fittings
- Extensive plaster repairs to existing walls
- Installation of new bespoke clinical wash basins & sluice facilities on purpose made IPS panels
- Repair / replace doors & frames as necessary
- Supply & install new HTM64 compliant worktops & units to amenity rooms & nurse stations
- Install new door & wall protection
- Installation of new vinyl / non slip vinyl flooring throughout.
- Dry lining of existing walls
- Complete decoration throughout.
- Reinstall all Client fixtures & fittings

IED worked closely with the deep clean team to ensure partial handovers took place when necessary to ensure continuity of work and to achieve target dates for re-opening the wards for patient occupation.

WARD DEEP CLEAN PROGRAMME

Upgrade existing wards to meet new clinical standards criteria
